

Large Skin Sheets: Meshed

A Temporary Solution for Burns Treatment

Maxxeus's split thickness sterile human skin grafts have assisted surgeons around the world in saving and enhancing lives. Temporarily serving as the patient's own skin, Maxxeus skin allografts promote healing, decrease the risk of infection, decrease evaporative water loss and help manage patient pain.

Maxxeus meshed or non-meshed allografts are offered in an array of sizes ensuring all acute burn patients can receive the exact allograft they need for healing. All grafts are produced with care and are of the utmost quality meeting or exceeding all standards set by the FDA and AATB.

Benefits of a large allograft skin sheet:

- Larger skin graft sizes treat large burns easier with fewer grafts saving the physician time and costs in the operating room.
- Larger skin graft sizes provide continuous uninterrupted coverage without the need for piecing together smaller grafts for large burn cases.
